

Aztec Pyramid Rules

Objective

Remove all cards from the pyramid.

Rules

- Paired cards whose values add to 13 are removed
- Cards can only be removed if they are exposed with no overlapping cards
- Only one card may be in the free slot. The card in the free slot cannot be removed until it is paired either from the pyramid or tableau

Layout

- A pyramid of seven rows, with each row having one more card than the above row. You cannot select cards that are covered by cards on lower rows.
- 4 tableau piles (below pyramid) – You can select the top card of any tableaux to remove cards from the pyramid.
- Free Slot (bottom right) – By selecting this area, the currently selected card will be stored in the free slot, allowing cards beneath the selected card to be opened up.
