

Argos Rules

Objective

Match at least three rows of cards with a corresponding card of the correct value.

A card may only be placed on top of another card if it is double that card's value, regardless of suit. If the card's value exceeds thirteen (King), the appropriate match is equal to double the base card's value minus thirteen. Following these rules results in the following card order:

A, 2, 4, 8, 3, 6, Q, J, 9, 5, 10, 7

Kings are separate and will always be placed on top of Kings.

Layout

- 52 cards laid out in rows of 13. Each card in the thirteenth column will be a King.
- Stock (top left, face down) – turn over 1 card at a time by clicking. There are no redeals in Argos, and the game is lost if three rows are not completed before the stock deck is exhausted. A card will be dealt automatically if the waste is empty.
- Waste (below stock) – Cards dealt from the stock deck available to play on the gameplay tableaux
